

Diagram illustrating the construction of a 3D drawing from a 2D drawing, showing the relationship between the two drawings and the resulting 3D drawing.

The diagram is organized into three rows, each representing a different stage of the construction process.

Row 1 (Top): Shows the initial 2D drawing (left) and the resulting 3D drawing (right). The 2D drawing is a simple line drawing of a cube. The 3D drawing is a more complex structure, showing the cube's internal structure and the resulting 3D drawing.

Row 2 (Middle): Shows the construction of the 3D drawing from the 2D drawing. The 2D drawing is shown on the left, and the 3D drawing is shown on the right. The 3D drawing is constructed by adding lines to the 2D drawing, representing the cube's internal structure.

Row 3 (Bottom): Shows the final 3D drawing (left) and the resulting 3D drawing (right). The 3D drawing is a complex structure, showing the cube's internal structure and the resulting 3D drawing.

The diagram illustrates the relationship between the 2D drawing, the 3D drawing, and the resulting 3D drawing, showing how the 3D drawing is constructed from the 2D drawing.
